

OZONOID DISBURSEMENT SYSTEMS COMBATING COVID-19 WITH OXIDATION EQUIPMENT

This is an application for the Infectious disease management using innovative application of ozone gas.

The Achilles heel of infectious diseases - the the application of intense oxidation.

As an ardent advocate of oxidative therapies, a founder of many endeavors, an inventor - I am requesting thirty million euros for the following purposes to deal a death blow to the fear of COVID-19:

1. To engage the medical community, community groups, emergency government, with the knowledge of ozone to manage infectious diseases as was shown with Ebola in 2014. To hold the WHO and the CDC accountable for the deaths of thousands of Ebola victims whom they had a hand in blocking from receiving life saving ozone therapy.
2. To develop devices which will safely down cycle ozone into a breathable derivative of molecules called ozonoids. Safe to breathe, even therapudic, yet powerful oxidies which I seek to demonstrate will neutralize the COVID-19 aerosolized agents. I seek to demonstrate that breathing ozonoid rich air will also dis-infect the lungs, reset immune function, and benefit all persons breathing the treated air.
3. To amplify the message of doctors and manufacturers who are advancing the necessary procedures and equipment to administer ozone gas intravenously into the body to combat the virus and modulate the immune system as was done with Ebola in 2014 in Sierra Leone. Medical oxygen contains no nitrogen. The concern about embolisms (air bubbles) in the blood – interrupting circulation is only in situations where nitrogen is in that air. The body can fully absorb the oxygen and ozone injected into the veins.
4. To examine claims of 5G signals being used to interfere with respiration yielding a kill shot on specific targeted individuals already weakened by pneumonia like symptoms.

IV injections of ozone gas in an epidemic situation costs just pennies per patient and may be done as an outpatient procedure.

I will need to assist existing manufactures in the creation of ozone machines which add humidity and to bubble through olive oil. These machines might be used in grocery stores, meeting rooms, buses, airports, on airliners – extra funds may be needed to fast track these machines for deployment on jet airplanes.

Since I will not have a corporate existence suitable to your liking – I propose that funds be set aside that I direct to be spent by your accountants. Airfair, logging, manufacturing expenses, advertizing, demonstration equipment, and a 200,000 Euro stipend for my time per year.

I have an immediate need to acquire professional grade equipment for demonstration to hospitals.

It is with great pride that I advance this cause before you. This isn't about making money – it's about buttressing humanity against the psychopaths who benefit by the cycles of fear, suppression, domination and enslavement.

Standing ready to the task,
I am Joseph William Baker
